Problems of Academic Counsellors at ODL in BRAOU, AP

T. Anjaneyulu

Email-anjaneyuluedu@gmail.com

Abstract

This article is on the different aspects of concern in improvement of counselling at open and distance learning in Dr. B.R Ambedkar Open University, Andhra Pradesh. Problems looked at include the characteristics of distance education, the distance learner, the different mechanism of learner's support and the important role of the academic counselling in maintaining quality in distance learning. Some measures are suggested based on techniques and strategies formaintaining the quality of counselling in distance learning with particular reference to Distance Educational Council of India for Distance Learning Programme (ODL). The author has a wide experience in dealing with practical issue involved in distance education at the grass root level by virtue of her work related experience in the distance learning programme of BRAOU for over a decade. Counselling breaks the gap between the students and teachers and boost confidence in the learners as answers to areas of doubt are being clarified. The learner is assisted beyond his or her obstacles and huddles towards a successful programme completion as a navigating compass for goal actualization. Even though there could be draw backs, the counselling support service should lighten this burden for proper adjustment in an expected field of study.

Keywords: Education, distance learning, counselling

Introduction

Distance Education gives room for access to highereducation to a buried segment of society. The need fordistance education can be equated to the information explosion for an increasing population and to its costeffectiveness. The conventional way of education hasnot been able to meet with the increasing demand foreducation (Avani&Kalapana, 2010).

The open and distance learning system has variations of benefits and has become more preferred due to somereasons. Through distance education, multiple people insociety desiring further study and are not able to proceedon a conventional school

Paper Code: 26826 - IJHSS

system due to varied excusesare accommodated. Distance education provides accessto higher education to adults who are willing to learn ontheir own and at their own pace (Undiyaundeye, 2012).

Distance education is cost effective. The major cost isstudy materials which is well prepared by academic specialists in he various field of study and printed or given in form of study manuals, CDs/cassettes or other electronic medium.

The conventional school system of education has beenable to meet up with the high demand for education. The classroom ratio and other conditions like percentage in class attendance, and physical presence for their studies are considerable and statutory for programme operation.

Freeman (1997) is of the view that distance learningmode allows and provides for several desired learners who find it difficult to attend regular programme of study.

The burning question here is the quality of distancelearning programmes and the learner would only beattracted only if given quality programmes can be offered to them.

Background of BRAOU: The debate at the national level on the Open University system stimulated thinking on the subject in various states. In Andhra Pradesh, a proposal was made to start an open university asearly as in 1978. In that year Ram Reddy, the then Vice Chancellor of the Osmania Universitywas requested by the then Education Minister of Andhra Pradesh to visit the British Open University and submit a Report. In the report, he commended the role of the unique institution and suggested a similar institution for Andhra Pradesh to strengthen non-formal education in the state. The Education Minister liked the suggestion and proposed an open university, thoughthe proposal did not bear fruit. About the same time, Osmania University made a proposal forstarting an 'open education college' (OEC) to strengthen distance education. The college was tohave full autonomy but the degrees were to be awarded by the Osmania University. At about he same time the OEC was to be set up, B. Venkataram, who as the Education Minister hadrequested G. Ram Reddy to submit a report on the British Open University in 1978, became the Chief Minister of the state. During the early days of his short tenure, the new Chief Ministerrevived the interest in the Open University system. In 1982 the Government of Andhra Pradeshdecided to establish an open university to provide "access to higher education to the adultpopulation of the State, for upgrading their functional capacities and improving quality of theirlife in context of broader social and political objectives and equalisation of educational opportunities and the emergence of a new concept of life long education". To give shape to thispolicy, the government appointed a committee under the chairmanship of G. Ram Reddy, thethen Vice Chancellor of Osmania University and, based on the Committee's report, the AndhraPradesh Open University (APOU) was established in 1982. The first full-fledged and totallypublic funded distance teaching university in India. The Open University formally came intoexistence on August 26, 1982, and was later renamed as Dr. B.R. Ambedkar Open University(BRAOU) in 1992. The course of distance education in the country would have been different, had this Open University not been set up.

Characteristics of Distance Learning Programme

Certain factors characterize distance learningprogramme. They include:

- i. Built-in flexibility,
- ii. Learner autonomy,
- iii. Democratization of education,
- iv. Use of modern technology in course delivery mechanism,
- v. Absence of peer learning group,
- vi. Separation between the learner and the teacher, and
- vii. The heterogeneity of the learners. Each of these characteristics is discussed next.

Built-in flexibility: Distance education is characterized by flexibility in terms of time, pace and place. Allprogrammes are allowed a minimum and a maximum duration. Hence, the enrolled learners can complete aprogramme at any time within the maximum duration. Attendance is compulsory only for practical sessions andlaboratory and other practical work which is necessary forskill development. It is not compulsory to attend thetheory counselling sessions although it is advisable to doso. Hence, the learners, most of whom have otherimportant commitments, are enabled to conveniently taketheir chosen programmes at their own pace and placetoo. A learner may have a transferable job or she/he may beoften on tour/deputation. In such case, she is facilitated to changethe study centre or exam centre as the limits of the distance learning institute may be state-wide and study centres are established in several placesat convenient locations of AP. There is a relaxed entry level tooin several cases. For example, any adult who is literate and wishes to complete Graduation needs not face theterrifying prospect of going to school and sitting in classwith many younger students. She/he can complete aBachelors Programme which facilitates thelearner to enroll for a Graduation or Diploma programmeof her/his choice.

Learner autonomy: There is more academic freedomaccorded to the learner because the ODL (Open andDistance Learning) system is more learner centric. In aconventional classroom, the teacher determines what she/hewill teach, whereas in a counselling session, the discussions can be directed by the learners according to their needs.

Democratization of education: Distance educationprovides for easy and equal access to all learnersdesires of pursuing their dream of obtaining qualityeducation. It Cuts across all barriers of caste, class and ered and gives equal access to all people therebydemocratizing education and taking it to the doorsteps of the learners. Use of modern technology in course delivery mechanism, Computer Aided Learning (CAL), online learning, satellite basedinstruction through teleconferencing, interactive radiolessons, audio and video lessons through CDs/Cassettes and thetelevision are all made possible in the ODL system. Amulti-media approach in programme delivery using the latest technology is possible through the ODL system. Infact, the world is now moving towards blended learning system.

Absence of peer learning group: Learners rarelycongregate together in a classroom situation except forthe counselling sessions. Since counselling sessions are not made compulsory it is rare for the entire learninggroup to come together. Thus the learner is often inisolation, but she/he is encouraged towards independent individual learning.

Separation between the learner and the teacher: Theteacher in a distance learning scenario is not visible. Thefaculties in the college in the main institute are farremoved from the learner. The teacher is also in built into the self-learning study material which is especially prepared with great care. The academic counsellor also acts as a teacher but meets the learners occasionally at the counselling sessions and/or interacts with thelearners through the comments written in the assignment responses submitted by the learners. Hence the learner and the teacher are physically separate in the ODL scenario.

Heterogeneity of the learners: The group of learnersenrolled for any distance learning programme is quiteheterogeneous unlike any conventional programme ofstudy as the learners may be drawn from variouscategories such as:

- a. Working persons wanting toupgrade their knowledge and skills,
- b. Persons living inremote areas,
- c. Students interested in parallel learning,
- d. Persons who are house-bound, physically or mentally challenged persons,
- e. Neo-literates, and
- f. Those whohad earlier dropped out and who now want to continuetheir education after a long gap,
- g. Job holders wanting to get promotions.

Strategies in Counselling at Open and DistanceLearning Programme

Distance learners should have certain specificcharacteristics. He is sufficiently motivated and hastherefore enrolled for a course with a specific objective. However he is isolated and may be in need of humancontact to help him cope-up better with his studyprogramme. He may have several other commitments and hence may have opted for a distance learningprogramme of his choice as it offers adequate flexibility assuring him an opportunity for further study. He is part of a heterogeneous group of fellow learners and he may ormay not have had any previous educational experience.

Such a learner would require a lot of support to help himwhenever he faces obstacles or difficulties of varioussorts during his period of study. This support would beacademic, administrative and also socio- psychological oremotional in nature. The support could be drawn from the study centre and Regional Centre functionaries and Academic Counsellors who have adequate knowledgeabout the subject matter and are qualified teachershaving experience of teaching at the appropriate levels in the conventional university education set up.

Learner Support Mechanisms: Learner support mechanisms are built into the system tohelp the learner cope with learning and to help themsustain their initial

motivation. These include

- 1. Self-instructionallearning materials,
- 2. Counsellingclasses (on Sundays),
- 3. Assignments(for PG),
- 4. Interactive radio counselling,
- 5. Various multimedia.
- 6. Radio,
- 7. Television,
- 8. Teleconferencing,
- 9. Satellite.
- 10. Guidebooks.
- 11. Practical sessions, and

Self-instructional Learning Materials (SIMS): These are specially designed and prepared and are highlystructured materials usually in print (books) form. They form the backbone of the Distance Learning mechanism and are provided to each enrolled learner at their study centre. The size of the materials and the content are such that materials can be easily carried by the learner and tries to simulate the class roomsetting. It is easy to read and understand and there are several access devices inbuilt in the materials to help the learner navigate through the material. Self-checkyour progress help the learner to know what he has learntand to recapitulate what he/she has studied and learnt.

Counselling sessions (on Sundays): These are organized at the studycentres with the intent of providing the human face to thelearner. These are coordinated by academic counsellors who are experienced and qualified teachers drawn from the conventional system of education and those who have been teaching the subject in reputed institutions. The number of counselling sessions (for UG 23-24, PG 18) is predetermined.

Assignments (for PG): The assignment component is veryimportant and is a very good teaching tool. This isbecause it is expected that the evaluator will offervaluable feedback and constructive positivecounsellorcomments to the learner. These have great pedagogic value as it helps the learner to know what his shortcomings are and gives him inputs for improvement. The assignment is a compulsory component and also helps the learner to prepare for the final exam. It is a formative evaluation and part of the Continuous Evaluation Scheme.

Interactive Radio Counselling: This is an innovative tool which can be effectively used to reach out to learners who are spread out. The learners can note the RadioCounselling schedule (every Sunday at 7am by Hyderabad B) and set aside that time for listening in and participating through the telephone lines. Since anyone who tunes in to the radio channel can listen, this is also a very good method of creating general awareness among the population at large.

Cassettes/Compact Discs (CDs): These are prepared assupplementary material and are available at the studycentres. Thus a multimedia approach tolearning is available to learners, improving the learningprocess and making it interesting and enjoyable.

Radio Broadcasts: Fixed time radio broadcasts areavailable on the National Radio Channels (Hyderabad A at 6.30am every Sunday). These areaired and available to the public.

Television Broadcasts: Television broadcasts related totopics of general interest but which are course based arealso available at fixed time on the National channels (Saptagiri at 5-30am-6.30am, every Sunday). Besides this, 24 hour TV channels are now availablewhich broadcast various programmes having educational and information value for various target groups likestudents from technical backgrounds, neo-literate groups, school students etc.

Teleconferencing including one-way video and twowayaudio teleconference system via satellite mode:

This system is available at all the Regional Centres andsome study centres. Learners can visit the receivingcentres and interact with the experts who are based in the studio at Dr.BR Ambedkar Open University.

Guidebooks including Practical Manuals and ProjectGuides (for MBA, M.Ed,&B.Ed): Learners in several programmes having aproject component are given the specially preparedpractical manuals and project guides which help themactually do and complete their projects. Supervisors/counsellors areavailable at the study centres and they supervise andguide the learners in their practical activities.

Practical Sessions: In all UG, PG sciences programmes having a practicalbias, practical sessions are well structured and offered to the learners. The number of sessions and the activities which are expected to be performed by learners during these sessions are well spelt out, leaving little scope for ambiguity but yet allowing for individual variations. Hence although these are distancelearners, they are given a practical exposure, the quality of which is comparable to the regular full time conventional programmes.

Importance of Counselling in Distance Education

Student counselling has prime importance in distanceeducation. Counselling adds the much needed humanelement to distance learning. The characteristics of the distance learner have been explained above and counselling sessions help the distance learner in the following ways.

Counselling sessions help to break the sense ofisolation of the learner. During counselling sessions, thelearner is able to come in contact with other learnerswhom he does not meet often. The first induction meetingas a counselling session is an icebreaker, as the learneris made familiar with the study centre set up, library,multimedia facilities, staff and academic counsellors. Doubts and queries are

answered boosting confidence. Tips are offered on how to study as an independentlearner in the distance learning mode. Counsellingsessions although beneficial are not made compulsory.

This is because there may be many learners, who haveother equally important commitments, and it wouldbecome impossible for them to continue with their studies and they would eventually be pushed out if attendance atcounselling sessions is made compulsory.

Attendance at counselling sessions helps the learner toovercome obstacles, of academic nature. The Academic Counsellors play a veryimportant role in distance education process. Who canbecome an academic counsellor and what would be thetraits of a person who wishes to perform the task of anacademic counsellor? He is a qualified experiencedperson who is already teaching at the appropriate similarlevel in the conventional system of education. He isusually is a full time lecturer/professor of the host institution wherestudy centre is located or a person with expertise on thesubject and invited from outside the host institution. Hemust be willing to spare his leisure time on holidays (on Sundays) forthe distance learner. He must be a committed teacheralways ready to help learners.

The qualities expected of an academic counsellor arewarmth, genuineness, acceptance and empathy. Such aperson would make an excellent counsellor. A personwho is doing academic counselling only for the sake of additional money that it brings in will not do justice to thetask that he has undertaken leaving his learners the poorer in experience and learning. Moreover counsellingneed not only take place in a face-to-face setting in agroup in a classroom. There can be various types of counselling including individual counselling according to specific needs for instance by telephone/mobile, via email, through teleconference, interactive radiocounselling, and through counsellor comments on assignments.

The Academic Counsellor is expected to perform animportant role of assisting the learner cross barriers andhurdles or obstacles in the path of completion of hisacademic programme. He is a friendly figure, a guide, amentor, and an advisor, who helps the learnernavigate through the study material provided. He offershelp on how to attempt and work on the assignments and also encourages use of appropriate additionalCDs/audio/video cassettes. He evaluates theassignments submitted by learners and providesfeedback through constructive critical comments.

Despite all the efforts to assist the learner and offerlearner support in several ways, there are manydrawbacks and limitations which have been noticed.

These include the following:

- The learners do not attend counselling sessionsmaybe due to paucity of time on account of othercommitments.
- They may not find the Counselling Sessionsuseful and interesting.
- The learner feels that he does not needcounselling.
- Learners are tongue-tied as they are not used toattending counselling sessions and are diffident and donot easily open up in front of others
- The Counsellor being drawn from conventional system is unable to overcome biases and easily reverts to the lecture method, instead of initiating a gooddialogue amongst the learners present.

• Counsellors expect a lot from the learners and donot take into consideration their heterogeneous backgrounds.

- They easily revert to conventional teaching and complain of insufficient time.
- They do not evaluate assignments on time andreturn them with no detailed comments for betterperformance.
- Low attendance at the session's leads to suspension of regular counselling sessions because thenumber of learners attending and present is less than the prescribed number often learners.

This acts as a dampener on the motivation level of boththe learner and the counsellor who feel disappointed andas if their time has been wasted. The learner who wantssupport and is present penalized because the other learners who do not feel the need for counselling or areunable to come remain absent.

Counselling is conducted mainly for the compulsorycourses where the number of enrolled learners is quitelarge as compared to the optional or elective, specialization courses where the learners get split intolesser numbers. The need for Counselling is felt muchmore for the specialization courses but often does nottake place.

Recommendations

Increasing enrolment alone cannot be an indicator of success of an institution. Providing good quality supportservices to distance learners is an issue of great concernin order to prevent attrition and encourage retention. Large number of dropouts in distance learning is anaccepted fact, but we cannot afford to be complacent. Learners tend to drop out and feel that they are incapable of completing the programme when they face problems and difficulties. They are less likely to seek help when they find that the system is not responsive.

The human element in learner support is very vital andcannot be overlooked, whatever the scope and speed oftechnological advances. There exists a very strong biasfor human contact, particularly in the Indian context. However explicit written instructions are, it has beennoted that the learner usually feels satisfied andcomfortable when he receives oral instruction. Learnersatisfaction and success rate is far more important for theoretically of the institution. The role of good qualityacademic counsellors fits in here.

This brings us to an important question about quality. The dictionary meaning of the term is capacity, ability orskill. In some respects when we speak of persons and inthe case of things; it is attribute, property or specialfeature. So, quality is a determinant of the grade ordegree of excellence and can mean many things formany people. Quality can mean; a continuous improvement process;

- Conformance to requirements
- Developing capabilities
- Better performance
- The ability to think and rationalize
- The ability to face new challenges
- Continuous skill enhancement.

• Doing things on time

Bearing in mind the above, the following may besuggested to overcome limitations and improve quality of counselling; Issue local advertisements to attract the best talent in the town. Provide attractive and timely remuneration. Maintain a database of counsellors, course-wise for every course at each study centre.

Hold regular orientation programmes to ensure roleclarity and facilitate meaningful interaction and feedbackbetween faculty at the Schools in the Headquarters andthe academic staff at the Regional Centres and thecounsellors at various study centres in a given region.

This could be done effectively through teleconferenceand face-to-face media. Provide adequate advance information about counselling schedules to the learners and adherence to the schedules. Provide for alternative arrangement in case of unforeseen departure from schedule.

Encourage multi-lateral communication and contactbetween counsellor and learners by telephone, e-mail, letters etc. for easy access, when needed. Introduce offsession meetings, flexi-time, flexilocation counselling.

Devise informal systems of monitoring. Make use ofconfidential unbiased appraisal from learners to renew counsellors. Review and renew all appointments of counsellors, systematically and regularly to weed outunsuitable persons and allow for accommodating newprospective counsellors. Quality Management can be oftwo types as a good quality management system and asa Total Quality Management approach.

In the first, it will be necessary to identify the processand then set out how this will be done. The number of Counselling sessions per 4 or 8 credit course is determined, or the number of counselling sessions for each block of study material. Then a monitoring system is established to collect details of how many sessions are held, the number of learners present, percentage of learners present calculated by a given mathematical formula etc. This will throw up numerical data, but will not really tell us about the quality of the counselling, whether it was effective or not, whether it helped and facilitated the learner to perform better.

In the second, the Total Quality Management approachmay suit distance- learning institutions better. In TotalQuality Management, the emphasis is not only oncodifying good practices, but also on continuous qualityimprovement, which means a systematic and continuousactivity to improve all processes and systems in theorganization to achieve an optimal level of performance.

Lesser number of dropouts and greater retention ratesmust be strived towards. We need to better our ownperformance and keep pace with the changing circumstances and situations. For this, it is necessary first define our quality goals clearly and communicate theseto all the personnel involved in learner support services, the regional centre staff, as well as the remotely situated study centre staff and the academic counsellors who are involved only part-time. This is no doubt a difficult proposition. It is important that all need to show total commitment to quality. It becomes imperative that the management style becomes more participative and also the learner feedback must be taken into consideration.

Each satisfied learner is important. Quality circles can beformed. Benchmarking becomes necessary to codify the existing standards in Academic Counselling, and in Student Support Services.

There are the four pillars of Total Quality Management which can be applied to Counselling. These are

- 1. Building synergistic relations,
- 2. Continuous improvement and self-evaluation,
- 3. The system of ongoing process, and
- 4. Leadership. Each of these is discussed next.

Building Synergistic Relations: Teamwork and collaboration between the learner and the academic counsellor is essential. Pooling the talent and expertise of the learners and the counsellors enhances the performance and learning of the students. The percentage of attendance is immaterial here and meaningful interaction can take place even on a one toone basis or in a small group. For effective communication, large groups of learners can be split into informal voluntary study circles. The product of their successful work together is the development of the learners' capabilities, interests, and character.

Continuous Improvement and Self Evaluation: Totaldedication to continuous improvement, personally and collectively, is the hallmark of Quality Counselling. The University must work collaboratively with the learners and the counsellors. Compliance, command, control and monitoring reports are outdated and should be things of the past. Today, it is in the best interest to encourage everyone's potential by dedicating ourselves to the continual improvement of our own abilities and those of the people with whom we work. There should be a freeexchange of ideas and experiences drawn from different regions. Total Quality is, essentially, a win-win approach that works to everyone's ultimate advantage. TQM emphasizes self-evaluation as part of a continuous improvement process. This principle focuses on learners' strengths, individual learning styles, and different types of intelligences.

System of Ongoing Process: This is the recognition of the organization as a system and the work done withinthe organization is an ongoing process. The primaryimplication of this principle is that individual learners, counsellors, study centre functionaries, and officers and staff at the Regional Centres and are less to blame for flaws and failuresthan the system in which they work. Quality meansworking on the system, which must be examined toidentify and eliminate the flawed processes that allow itsparticipants to fail. Regular orientation and trainingprogrammes and follow up feedback mechanism arenecessary if it is expected that the academic counsellorsunderstand and perform the roles expected of them to fullsatisfaction. Likewise, induction of learners into the distance learning process can prove to be very usefuland serious attention must be paid to this aspect. Sincesystems are made up of processes, the improvementsmade in the quality of these processes largely determine the quality of the resulting product. In the new paradigmof learning, continual improvement of learning processes based on learning outcomes replaces the

outdated "teachand test' examination mode. Despite the final evaluation system, check lists and monitoring proforma can be developed and designed by the eminent academicians, the Regional Centres and the Services Division with a view to seeking proper feedback from the students, the analysis of which would prove to be useful for improvement in the system.

Leadership: The success of TQM is the responsibility oftop management. The university must establish thecontext in which learners can achieve their full potentialthrough the continuous improvement that results from counsellors and learners working together. Availability of all academic resources at the study centres and access to electronic media of communication is imperative. Learners are in need of academic and administrative support. The system must be sensitive and responsive tolearners' needs and queries. The learners are more likely to drop out when they have problems and the system is not as responsive as they would like it to be. Can therebe a shift in the mode of counselling? For courses withless enrolment, can academic support be provided through other means rather than counselling sessions, like telephone, letters, e-mail, mobiles, formation of study circles, Quality circles etc. Can payment be made on aper learner basis, so that the learner is able to receive support whenever he/she needs it and the counsellor is easily approachable?

Conclusion

In order to achieve the above, participatory managementamong well-trained and educated partners is crucial toimprove the quality of counselling, in particular and the the the the principles of TotalQuality Management and must be trained appropriately inTQM methods. They need support in finding the time and resources to pursue the goals that are set. Some personnel who are committed to the principles of TQMmay be called in as trainers and can facilitate the processof continuous quality improvement. Their vision and skillsin leadership, management, interpersonal communication problem solving and creative cooperation will prove to be important qualities for successful implementation of the present TQMin the distance- learning scenario.
